-

R1: Login (Universal)

Already documented in master playbook - see Screen R1

R2: Reception Dashboard

Already documented in master playbook - see Screen R2

R3: Patient Search Results

Already documented in master playbook - see Screen R3

R4: New Patient Registration

Route: /reception/patients/new

Role: Reception

Backend API: POST /api/v1/patients

Complete Component Checklist

UI Elements:

- **[] Page Header**
 - Title: "New Patient Registration"
 - Breadcrumb: Home → Patients → New Patient
- **[] Personal Information Section**
 - Section heading: "Personal Information"
 - **[] Name Input** (Required)
 - Label: "Full Name *"
 - Type: text
 - Placeholder: "Enter patient's full name"
 - Validation: Min 3 characters, alphabets only
 - API field: name
 - **[] Date of Birth Picker** (Required)
 - Label: "Date of Birth *"
 - Type: date picker
 - Max date: Today
 - API field: dob
 - Auto-calculate age on selection
 - **[] Age Display** (Read-only)
 - Label: "Age"
 - Calculated from DOB
 - Format: "45 years" or "2 months" or "15 days"
 - **[] Sex Radio Buttons** (Required)
 - Label: "Sex *"
 - Options: Male, Female, Other
 - API field: sex
- **[] Contact Information Section**
 - Section heading: "Contact Information"
 - **[] Phone Input** (Required)
 - Label: "Phone Number *"
 - Type: tel
 - Placeholder: "10-digit mobile number"
 - Validation: Exactly 10 digits, numbers only
 - API field: phone
 - Real-time duplicate check: Show warning if phone exists

- [] **Alternate Phone Input** (Optional)
 - Label: "Alternate Phone"
 - Type: tel
 - Placeholder: "Alternate contact number"
 - API field: alternatePhone
- [] **Email Input** (Optional)
 - Label: "Email"
 - Type: email
 - Placeholder: "patient@example.com"
 - Validation: Email format
 - API field: email
- [] **Address Textarea** (Optional)
 - Label: "Address"
 - Rows: 3
 - Placeholder: "Full address"
 - API field: address
- [] **Medical Information Section**
 - Section heading: "Medical Information (Optional)"
 - [] **Blood Group Dropdown** (Optional)
 - Label: "Blood Group"
 - Options: A+, A-, B+, B-, O+, O-, AB+, AB-, Unknown
 - API field: bloodGroup
 - [] **Known Allergies Input** (Optional)
 - Label: "Known Allergies"
 - Type: text
 - Placeholder: "e.g., Penicillin, Latex"
 - API field: allergies
 - [] **Medical History Textarea** (Optional)
 - Label: "Medical History"
 - Rows: 3
 - Placeholder: "Chronic conditions, past surgeries, etc."
 - API field: medicalHistory
- [] **Referral Information Section** (Optional)
 - Section heading: "Referral Information"
 - [] **Referred By Dropdown** (Optional)
 - Label: "Referred By"
 - Options: Load from GET /api/v1/doctors?type=Referrer
 - Searchable dropdown
 - API field: referredBy (doctorId)
 - [] **Referral Commission Checkbox** (Optional)
 - Label: "Commission Applicable"
 - Default: Unchecked
 - Shows only if "Referred By" selected
 - API field: commissionApplicable
- [] **Duplicate Detection Warning** (Conditional)
 - Shows if: Phone number matches existing patient during typing
 - Warning message: "⚠ A patient with this phone number already exists"
 - Display existing patient: MRN, Name, DOB
 - **View Existing Patient Button**
 - Text: "View Existing Patient"
 - Navigate to: /reception/patients/{existingPatientId}

- **Continue Anyway Button**
 - Text: "Continue with New Registration"
 - Allows creating duplicate (with confirmation)
- **[] Action Buttons**
 - **[] Save & Create Visit Button** (Primary)
 - Text: "Save & Create Visit"
 - Color: Primary (blue/green)
 - Keyboard: Ctrl+S
 - Action:
 1. Validate all required fields
 2. Call POST /api/v1/patients
 3. On success: Navigate to /reception/visits/new?patientId={newPatientId}
 - **[] Save Only Button** (Secondary)
 - Text: "Save Patient"
 - Color: Secondary (gray)
 - Action:
 1. Validate all required fields
 2. Call POST /api/v1/patients
 3. On success: Navigate to /reception/patients/{newPatientId}
 - **[] Cancel Button**
 - Text: "Cancel"
 - Color: Text/outline
 - Keyboard: Esc
 - Action: Navigate back to /reception/dashboard
- **[] Error Display Area**
 - Position: Top of form
 - Shows: Validation errors or API errors
 - Format: Red banner with error messages
 - Dismissible
- **[] Loading Spinner**
 - Shows: During API call
 - Disables: All form fields and buttons

API Integration

1. Create Patient API:

POST /api/v1/patients

Request Body:

```
{
  "name": "Ramesh Kumar Sharma",
  "dob": "1980-05-15",
  "sex": "M",
  "phone": "9876543210",
  "alternatePhone": "9123456789",
  "email": "ramesh@example.com",
  "address": "123, MG Road, Bangalore",
  "bloodGroup": "O+",
  "allergies": "Penicillin",
  "medicalHistory": "Diabetes since 2015",
```

```
"referredBy": "doctor-uuid-here",
"commissionApplicable": true
}
```

Success Response (201):

```
{
  "data": {
    "patientId": "uuid",
    "mrn": "A00123",
    "name": "Ramesh Kumar Sharma",
    "dob": "1980-05-15",
    "age": 45,
    "sex": "M",
    "phone": "9876543210",
    "createdAt": "2025-11-22T10:30:00Z"
  }
}
```

Error Response (400):

```
{
  "error": {
    "code": "VALIDATION_ERROR",
    "message": "Invalid input",
    "details": [
      { "field": "phone", "message": "Phone number already exists" },
      { "field": "name", "message": "Name must be at least 3 characters" }
    ]
  }
}
```

Error Response (409):

```
{
  "error": {
    "code": "DUPLICATE_PATIENT",
    "message": "Patient with this phone number already exists",
    "existingPatient": {
      "patientId": "uuid",
      "mrn": "A00001",
      "name": "Ramesh Sharma",
      "phone": "9876543210"
    }
  }
}
```

2. Check Duplicate (Real-time):

GET /api/v1/patients/check-duplicate?phone=9876543210

Response (200):

```
{
  "exists": true,
  "patient": {
    "patientId": "uuid",
```

```
"mrn": "A00001",
"name": "Ramesh Sharma",
"dob": "1980-05-15",
"phone": "9876543210"
}
}
```

Response (200) if no duplicate:

```
{
"exists": false
}
```

3. Get Referral Doctors:

GET /api/v1/doctors?type=Referrer

Response (200):

```
{
"data": [
{
"doctorId": "uuid",
"name": "Dr. Anand Kumar",
"specialization": "General Physician",
"commissionRate": 15.0
},
// ... more
]
}
```

Keyboard Shortcuts

- **Ctrl+S:** Save & Create Visit
- **Esc:** Cancel
- **Tab:** Navigate forward between fields
- **Shift+Tab:** Navigate backward

Validation Rules

1. Name:

- Required
- Min 3 characters
- Alphabets and spaces only
- No special characters except hyphen and apostrophe

2. DOB:

- Required
- Cannot be future date
- Must be reasonable (not > 150 years old)

3. Sex:

- Required
- One of: M, F, Other

4. Phone:

- Required

- Exactly 10 digits
- Numbers only
- Duplicate check on blur (call API)

5. Email:

- Optional
- Valid email format if provided

Gemini Prompt for R4

Build the New Patient Registration screen (React + Vite + Tailwind CSS + shadcn/ui).

BACKEND APIS:

1. POST /api/v1/patients

Request: { "name": "string", "dob": "YYYY-MM-DD", "sex": "M | F | Other", "phone": "string", "alternatePhone": "string", "email": "string", "address": "string", "bloodGroup": "string", "allergies": "string", "medicalHistory": "string", "referredBy": "uuid", "commissionApplicable": boolean }

Success (201): { "data": { "patientId": "uuid", "mrn": "A00123", "name": "string", "dob": "YYYY-MM-DD", "age": 45, "sex": "string", "phone": "string", "createdAt": "ISO" } }

Error (400): { "error": { "code": "VALIDATION_ERROR", "message": "string", "details": [{ "field": "string", "message": "string" }] } }

Error (409): { "error": { "code": "DUPLICATE_PATIENT", "message": "string", "existingPatient": {...} } }

2. GET /api/v1/patients/check-duplicate?phone={phone}

Response (200): { "exists": boolean, "patient": {...} }

3. GET /api/v1/doctors?type=Referrer

Response (200): { "data": [{ "doctorId": "uuid", "name": "Dr. Name", "specialization": "string", "commissionRate": 15.0 }] }

UI REQUIREMENTS:

PAGE HEADER:

1. Title: "New Patient Registration"
2. Breadcrumb: Home → Patients → New Patient
 - Home link: /reception/dashboard

PERSONAL INFORMATION SECTION:

3. Section heading: "Personal Information"

4. Name input *

- Label: "Full Name *"
- Type: text
- Placeholder: "Enter patient's full name"
- Required: Yes
- Validation: Min 3 chars, alphabets/spaces/hyphen/apostrophe only
- API field: name

5. Date of Birth picker *

- Label: "Date of Birth *"
- Type: date picker (use shadcn/ui DatePicker)
- Max date: Today

- Required: Yes
 - API field: dob
 - On change: Auto-calculate age
6. Age display (read-only)
- Label: "Age"
 - Calculate from DOB
 - Format: "45 years" or "2 months" or "15 days"
 - Not sent to API
7. Sex radio buttons *
- Label: "Sex *"
 - Options: Male, Female, Other
 - Required: Yes
 - API field: sex

CONTACT INFORMATION SECTION:

8. Section heading: "Contact Information"

9. Phone input *
- Label: "Phone Number *"
 - Type: tel
 - Placeholder: "10-digit mobile number"
 - Required: Yes
 - Validation: Exactly 10 digits, numbers only
 - API field: phone
 - On blur: Call GET /api/v1/patients/check-duplicate?phone={value}
 - If exists: Show duplicate warning (see below)
10. Alternate Phone input
- Label: "Alternate Phone"
 - Type: tel
 - Placeholder: "Alternate contact number"
 - Optional
 - Validation: 10 digits if provided
 - API field: alternatePhone
11. Email input
- Label: "Email"
 - Type: email
 - Placeholder: "patient@example.com"
 - Optional
 - Validation: Email format if provided
 - API field: email
12. Address textarea
- Label: "Address"
 - Rows: 3
 - Placeholder: "Full address"
 - Optional
 - API field: address

MEDICAL INFORMATION SECTION:

13. Section heading: "Medical Information (Optional)"

14. Blood Group dropdown
- Label: "Blood Group"

- Options: A+, A-, B+, B-, O+, O-, AB+, AB-, Unknown
- Optional
- API field: bloodGroup

15. Known Allergies input

- Label: "Known Allergies"
- Type: text
- Placeholder: "e.g., Penicillin, Latex"
- Optional
- API field: allergies

16. Medical History textarea

- Label: "Medical History"
- Rows: 3
- Placeholder: "Chronic conditions, past surgeries, etc."
- Optional
- API field: medicalHistory

REFERRAL INFORMATION SECTION:

17. Section heading: "Referral Information"

18. Referred By dropdown

- Label: "Referred By"
- Load options from: GET /api/v1/doctors?type=Referrer
- Searchable dropdown (use shadcn/ui Combobox)
- Display: Doctor name + specialization
- Optional
- API field: referredBy (send doctorId)

19. Referral Commission checkbox

- Label: "Commission Applicable"
- Default: Unchecked
- Shows only if: "Referred By" is selected
- Optional
- API field: commissionApplicable

DUPLICATE DETECTION WARNING (CONDITIONAL):

20. Shows if: GET /api/v1/patients/check-duplicate returns exists=true

21. Warning banner:

- Color: Yellow/orange
- Icon: Warning triangle
- Message: "⚠ A patient with this phone number already exists"
- Display existing patient: "{mrn} - {name} (DOB: {dob})"

22. View Existing Patient button

- Text: "View Existing Patient"
- Navigate to: /reception/patients/{existingPatient.patientId}

23. Continue Anyway button

- Text: "Continue with New Registration"
- Shows confirmation dialog: "Are you sure? This will create a duplicate patient record."
- On confirm: Proceed with POST /api/v1/patients

ACTION BUTTONS:

24. Save & Create Visit button (primary)

- Text: "Save & Create Visit"
- Color: Primary (green)
- Position: Bottom right
- Keyboard: Ctrl+S
- Disabled: If any required field empty OR validation error
- Action:
 1. Validate all fields
 2. Call POST /api/v1/patients
 3. On success (201):
 - Show success toast: "Patient registered successfully. MRN: {mrn}"
 - Navigate to: /reception/visits/new?patientId={newPatientId}
 4. On error (400):
 - Display error:details below each field
 - Show error banner at top
 5. On error (409):
 - Show duplicate warning banner (as described above)
- 25. Save Only button (secondary)
 - o Text: "Save Patient"
 - o Color: Secondary (gray)
 - o Position: Bottom right (left of primary)
 - o Action:
 1. Validate all fields
 2. Call POST /api/v1/patients
 3. On success (201):
 - Show success toast: "Patient registered successfully. MRN: {mrn}"
 - Navigate to: /reception/patients/{newPatientId}
- 26. Cancel button
 - o Text: "Cancel"
 - o Color: Text/outline
 - o Position: Bottom left
 - o Keyboard: Esc
 - o Action: Navigate to /reception/dashboard

ERROR HANDLING:

27. Error banner (top of form)

- Shows: If API returns error
- Color: Red
- Display: error:message
- Dismissible: X button

28. Field-level errors

- o Shows: Below each field if validation fails or API returns field-specific error
- o Color: Red text
- o Display: error:details[].message for that field

LOADING STATE:

29. Loading spinner

- Shows: During POST /api/v1/patients call
- Disables: All form fields and buttons
- Overlay: Semi-transparent

KEYBOARD SHORTCUTS:

- Ctrl+S: Save & Create Visit
- Esc: Cancel
- Tab: Next field
- Shift+Tab: Previous field

VALIDATION:

- Real-time validation on blur for each field
- Show error message below field
- Disable save buttons if any required field empty
- Disable save buttons if any validation error

DO NOT:

- Use mock data
- Skip duplicate detection
- Skip field-level validation
- Skip real-time phone duplicate check
- Allow submit without required fields

ACCEPT CRITERIA:

- All 29 components present and functional
- Required field validation works
- Phone duplicate detection triggers on blur
- Duplicate warning shows with View/Continue buttons
- Save & Create Visit navigates to visit creation with patientId
- Save Only navigates to patient details
- Cancel returns to dashboard
- All keyboard shortcuts work
- Loading states show during API calls
- Error handling displays field-specific and general errors
- Age auto-calculates from DOB
- Referral commission checkbox shows only when referrer selected

R5: Patient Details/Profile

Route: /reception/patients/{patientId}

Role: Reception

Backend APIs:

- GET /api/v1/patients/{id}
- PUT /api/v1/patients/{id}
- GET /api/v1/visits?patientId={id}
- GET /api/v1/patients/{id}/phone-history

Complete Component Checklist

UI Elements:

- ☐ **Page Header**
 - Patient name (large, prominent)
 - MRN badge
 - Age + Sex display
 - Breadcrumb: Home → Patients → {MRN}
- ☐ **Quick Actions Bar**
 - ☐ **Edit Patient Button**
 - Text: "Edit Details"
 - Icon: Pencil icon
 - Keyboard: Ctrl+E
 - Action: Toggle edit mode for patient details
 - ☐ **Create Visit Button**
 - Text: "Create Visit"
 - Icon: Plus icon
 - Keyboard: Ctrl+V
 - Navigate to: /reception/visits/new?patientId={patientId}
 - ☐ **View History Button**
 - Text: "Visit History"
 - Icon: Clock icon
 - Action: Scroll to visit history section
- ☐ **Patient Demographics Card (View Mode)**
 - ☐ Name display
 - ☐ DOB display (with age)
 - ☐ Sex display
 - ☐ Blood Group display
 - ☐ Phone display
 - ☐ Alternate Phone display
 - ☐ Email display
 - ☐ Address display
- ☐ **Patient Demographics Card (Edit Mode)**
 - Shows when: Edit button clicked
 - All fields editable except MRN
 - Same validation as R4
 - ☐ **Save Changes Button**
 - Text: "Save Changes"
 - Keyboard: Ctrl+S
 - API: PUT /api/v1/patients/{id}
 - ☐ **Cancel Edit Button**
 - Text: "Cancel"
 - Keyboard: Esc
 - Action: Revert to view mode
- ☐ **Phone History Section (Collapsible)**
 - Heading: "Phone Number History"
 - Shows: All previous phone numbers with change dates
 - API: GET /api/v1/patients/{id}/phone-history
 - **Per History Item:**

- Phone number
 - Date changed
 - Changed by (user name)
- ☐ **Medical Information Card**
 - Heading: "Medical Information"
 - ☐ Blood Group
 - ☐ Known Allergies
 - ☐ Medical History
 - Editable in edit mode
- ☐ **Referral Information Card**
 - Heading: "Referral Information"
 - ☐ Referred By (doctor name)
 - ☐ Commission Applicable (Yes/No badge)
 - Editable in edit mode
- ☐ **Visit History Table**
 - Heading: "Visit History (All Visits)"
 - API: GET /api/v1/visits?patientId={patientId}
 - Columns: Date, Token, Tests, Status, Amount, Action
 - Sort: Latest first
 - **Per Row:**
 - Date: Visit date formatted
 - Token: Visit token (e.g., "P-042")
 - Tests: Comma-separated test names
 - Status: Badge (Paid/Unpaid/Completed)
 - Amount: Currency formatted
 - Action button:
 - ☐ **View Visit Button**
 - Text: "View"
 - Navigate to: /reception/visits/{visitId}
- ☐ **Empty State** (if no visits)
 - Message: "No visits recorded for this patient"
 - ☐ **Create First Visit Button**
 - Text: "Create First Visit"
 - Navigate to: /reception/visits/new?patientId={patientId}

API Integration

1. Get Patient Details:

GET /api/v1/patients/{patientId}

Response (200):

```
{
  "data": {
    "patientId": "uuid",
    "mrn": "A00123",
    "name": "Ramesh Kumar Sharma",
    "dob": "1980-05-15",
    "age": 45,
    "sex": "M",
    "phone": "9876543210",
    "alternatePhone": "9123456789",
```

```
"email": "ramesh@example.com",
"address": "123, MG Road, Bangalore",
"bloodGroup": "O+",
"allergies": "Penicillin",
"medicalHistory": "Diabetes since 2015",
"referredBy": {
  "doctorId": "uuid",
  "name": "Dr. Anand Kumar"
},
"commissionApplicable": true,
"createdAt": "2025-11-01T10:00:00Z",
"lastVisitDate": "2025-11-20"
}
}
```

2. Update Patient:

PUT /api/v1/patients/{patientId}

Request Body: (same as POST /api/v1/patients)

```
{
  "name": "Ramesh Kumar Sharma",
  "dob": "1980-05-15",
  ...
}
```

Response (200):

```
{
  "data": {
    "patientId": "uuid",
    "mrn": "A00123",
    ...
  }
}
```

3. Get Phone History:

GET /api/v1/patients/{patientId}/phone-history

Response (200):

```
{
  "data": [
    {
      "phone": "9876543210",
      "changedAt": "2025-11-22T10:00:00Z",
      "changedBy": {
        "userId": "uuid",
        "name": "Priya Sharma"
      },
      "isCurrent": true
    },
    {
      "phone": "9123456789",
      "changedAt": "2025-11-01T10:00:00Z",

```

```

"changedBy": {
  "userId": "uuid",
  "name": "System"
},
"isCurrent": false
}
]
}

```

4. Get Visit History:

GET /api/v1/visits?patientId={patientId}

Response (200):

```

{
  "data": [
    {
      "visitId": "uuid",
      "token": "P-042",
      "visitDate": "2025-11-20",
      "tests": [
        { "testCode": "CBC", "testName": "Complete Blood Count" }
      ],
      "status": "Paid",
      "totalAmount": 1250.00
    },
    // ... more
  ]
}

```

Keyboard Shortcuts

- **Ctrl+E**: Toggle edit mode
- **Ctrl+V**: Create new visit
- **Ctrl+S**: Save changes (in edit mode)
- **Esc**: Cancel edit (in edit mode) or go back

Gemini Prompt for R5

Build the Patient Details/Profile screen (React + Vite + Tailwind CSS + shadcn/ui).

BACKEND APIs:

1. GET /api/v1/patients/{patientId}

Response: { "data": { "patientId": "uuid", "mrn": "A00123", "name": "string", "dob": "YYYY-MM-DD", "age": 45, "sex": "M|F|Other", "phone": "string", "alternatePhone": "string", "email": "string", "address": "string", "bloodGroup": "string", "allergies": "string", "medicalHistory": "string", "referredBy": { "doctorId": "uuid", "name": "Dr Name" }, "commissionApplicable": boolean, "createdAt": "ISO", "lastVisitDate": "YYYY-MM-DD" } }

2. PUT /api/v1/patients/{patientId}

Request: (same as POST /api/v1/patients)

Response (200): { "data": { ... } }

3. GET /api/v1/patients/{patientId}/phone-history
Response: { "data": [{ "phone": "string", "changedAt": "ISO", "changedBy": { "userId": "uuid", "name": "string" }, "isCurrent": boolean }] }
4. GET /api/v1/visits?patientId={patientId}
Response: { "data": [{ "visitId": "uuid", "token": "P-042", "visitDate": "YYYY-MM-DD", "tests": [{ "testCode": "CBC", "testName": "string" }], "status": "Paid|Unpaid|Completed", "totalAmount": 1250.00 }] }

UI REQUIREMENTS:

PAGE HEADER:

1. Patient name (large, prominent): [data.name](#)
2. MRN badge: data.mrn (blue badge)
3. Age + Sex: "{data.age} years | {data.sex}"
4. Breadcrumb: Home → Patients → {data.mrn}

QUICK ACTIONS BAR:

5. Edit Patient button

- Text: "Edit Details"
- Icon: Pencil
- Keyboard: Ctrl+E
- Action: Toggle edit mode (show editable fields)

6. Create Visit button

- Text: "Create Visit"
- Icon: Plus
- Keyboard: Ctrl+V
- Navigate to: /reception/visits/new?patientId={patientId}

7. View History button

- Text: "Visit History"
- Icon: Clock
- Action: Scroll to visit history table

PATIENT DEMOGRAPHICS CARD (VIEW MODE):

8. Card heading: "Patient Information"

9. Display fields (read-only):

- Name: [data.name](#)
- DOB: Format as "DD-MMM-YYYY ({age} years)"
- Sex: data.sex
- Blood Group: data.bloodGroup or "Not specified"
- Phone: data.phone
- Alternate Phone: data.alternatePhone or "-"
- Email: data.email or "-"
- Address: data.address or "-"

PATIENT DEMOGRAPHICS CARD (EDIT MODE):

10. Shows when: Edit button clicked
11. All fields editable (same as R4 New Patient form)
12. Validation: Same as R4
13. MRN: Read-only (cannot be changed)

14. Save Changes button

- Text: "Save Changes"
- Color: Primary
- Keyboard: Ctrl+S
- Action:
 1. Validate fields
 2. Call PUT /api/v1/patients/{patientId}
 3. On success: Toggle back to view mode, show success toast
 4. On error: Show error messages

15. Cancel Edit button

- Text: "Cancel"
- Color: Secondary
- Keyboard: Esc
- Action: Revert to view mode (discard changes)

PHONE HISTORY SECTION (COLLAPSIBLE):

16. Section heading: "Phone Number History"

17. Collapsed by default

18. Expand/collapse button

19. On expand: Call GET /api/v1/patients/{patientId}/phone-history

20. For each phone in history:

- Phone number
- Date changed: Format as "DD-MMM-YYYY HH:MM"
- Changed by: [changedBy.name](#)
- Current indicator: Badge "Current" if isCurrent=true

MEDICAL INFORMATION CARD:

21. Card heading: "Medical Information"

22. Display fields (editable in edit mode):

- Blood Group: data.bloodGroup
- Known Allergies: data.allergies or "None specified"
- Medical History: data.medicalHistory or "None specified"

REFERRAL INFORMATION CARD:

23. Card heading: "Referral Information"

24. Display fields (editable in edit mode):

- Referred By: [data.referredBy.name](#) or "Not referred"
- Commission: Badge "Yes" (green) or "No" (gray) based on data.commissionApplicable

VISIT HISTORY TABLE:

25. Table heading: "Visit History (All Visits)"

26. Load: Call GET /api/v1/visits?patientId={patientId} on page load

27. Columns: Date, Token, Tests, Status, Amount, Action

28. For each visit:

- Date: Format visit.visitDate as "DD-MMM-YYYY"
- Token: visit.token
- Tests: Comma-separated visit.tests.map(t => t.testName).join(", ")
- Status: Badge with color (Paid=green, Unpaid=orange, Completed=blue)
- Amount: "₹" + visit.totalAmount
- Action:

* View Visit button

- Text: "View"
- Navigate to: /reception/visits/{visit.visitId}

EMPTY STATE (if no visits):

29. Message: "No visits recorded for this patient"

30. Create First Visit button

- Text: "Create First Visit"
- Color: Primary
- Navigate to: /reception/visits/new?patientId={patientId}

KEYBOARD SHORTCUTS:

- Ctrl+E: Toggle edit mode
- Ctrl+V: Create visit
- Ctrl+S: Save changes (in edit mode)
- Esc: Cancel edit or go back

ERROR HANDLING:

- Show error toast if any API fails
- In edit mode: Show field-level errors below each field

LOADING STATES:

- Show skeleton for patient details during initial load
- Show skeleton for visit history table
- Show spinner on Save Changes button during update

DO NOT:

- Use mock data
- Skip edit mode
- Skip phone history
- Skip visit history
- Allow editing MRN

ACCEPT CRITERIA:

- Patient details load from API
- Edit mode toggles correctly
- Update patient works with validation
- Phone history loads and displays
- Visit history table shows all visits
- All buttons navigate correctly
- Keyboard shortcuts work
- Empty state shows if no visits

Continue with remaining 7 screens (R6-R12)?

I can generate:

- R6: Patient Merge
- R7: New Visit Creation
- R8: Visit Details

- R9: Payment Processing
- R10: Print Token/Invoice
- R11: Appointments Calendar
- R12: New Appointment

Each with same level of detail (every button, field, API call, keyboard shortcut). **Ready to continue?**
